INSIGHTS

- The cafe generated a total revenue of ($31,934), with (10,800) units sold .The average revenue per transaction is approximately ($ 8.98) ,indicating moderate customer spendings
- Revenue shows a sharp drop around May ($2,186), indicating a temporary decline in sales .Sales gradually recover after mid-year and peak again near November–December ($2,874).
- Salad contributes the highest revenue ($7,305) among all products, followed by Sandwich ($5,696) and Smoothie ($4,744) , showing that customers prefer these items more compared to others like Tea ($1,979) and Cookie ($1,362), which generate lower revenue.
- In-store orders generate slightly higher revenue ($16,310) than takeaway orders ($15,623), showing that customers still prefer dining at the cafe while takeaway remains an important option.
- Digital payment methods contribute a major share of transactions (34.76%), showing that customers prefer quick and convenient payment options along with traditional methods like cash.
- Salad shows the highest price per unit compared to other items, which means its pricing should be carefully managed to maintain profitability.
- The dataset included several entries labeled as "UNKNOWN," which were filtered during analysis to improve clarity, highlighting the importance of better data collection in future operations.
